

CineVerse Entertainment

Audience Behavior Report — H2 2024 & Q1 2025

Introduction

This report analyses viewer behaviour patterns across CineVerse's platform during H2 2024 and Q1 2025. Data is drawn from 62 million monthly active users across India. Key dimensions analysed include genre preference by age and region, device usage, completion rates, subscription tier behaviour, and repeat viewing patterns.

Genre Preferences by Age Segment

Genre	18–24	25–34	35–44	45+
Action	38%	34%	22%	12%
Drama	18%	28%	34%	42%
Comedy	22%	18%	20%	24%
Romance	14%	12%	16%	14%
Thriller	6%	6%	6%	6%
Horror/Other	2%	2%	2%	2%

Action dominates the 18–34 demographic, which directly explains Stellar Run's outsized performance with younger urban viewers. Drama is the top genre for viewers 35 and above. Comedy's relatively flat distribution across age groups suggests the issue is content quality rather than demographic mismatch.

Regional Viewing Behaviour

Mumbai is the highest-engagement city across all genres, consistently posting engagement scores 0.3–0.5 points above the national average. Premium tier penetration in Mumbai is 48% — highest in the country. Viewers in Mumbai also show the highest repeat viewing rate at 22% of total watch sessions.

Bangalore is the fastest-growing market. Engagement scores grew 18% QoQ in Q1 2025. The 22–32 age cohort is dominant, with strong preference for action and thriller content. Premium conversion rates are improving rapidly.

Delhi shows strong absolute numbers but slightly lower engagement scores than Mumbai, partly attributed to higher free-tier usage. Comedy performs marginally better in Delhi than other metro cities.

Tier-2 cities (Jaipur, Lucknow, Agra, Ranchi) are under-penetrated but show high completion rates when content does land — suggesting strong latent demand once discovery improves.

Completion Rate Analysis

Genre	Avg Completion Rate	Premium Tier	Free Tier
Action	91%	97%	82%
Drama	86%	93%	76%
Romance	83%	90%	73%
Thriller	88%	94%	79%
Comedy	58%	66%	48%
Horror	79%	85%	68%

Comedy's 58% average completion rate is the lowest of any genre and a key signal of audience dissatisfaction. Viewers are starting comedy films but not finishing them — indicating the drop-off is a content quality issue rather than a discovery problem. This is corroborated by low NPS scores and negative review sentiment for recent comedy releases.

Device & Viewing Context

Mobile is the dominant device at 61% of total watch sessions, followed by TV (Smart TV / Cast) at 26% and Laptop at 13%. Premium tier subscribers are 2.4x more likely to watch on TV, which correlates with higher completion rates and engagement scores. Stellar Run's premium viewership drove a record 34% of its streams on connected TVs.

Key Behavioural Insights for Leadership

- Stellar Run created a new benchmark: 98% completion rate + 22% repeat view rate — study this blueprint.
- Comedy viewers drop off within the first 40 minutes — scripts need stronger opening acts.
- Bangalore is the next Mumbai — marketing spend should be reweighted accordingly.
- Premium tier subscribers drive disproportionate engagement; conversion incentives should be prioritised.
- Celebrity-driven social campaigns correlate directly with Day-1 viewership spikes.
- Sci-Fi (Dark Orbit) needs audience education campaigns — the genre is nascent in India.
